UNIVERSIDAD DE LAS AMERICAS PUEBLA – SCHOOL OF ENGINEERING – STUDENT OUTCOMES

Academic Program		**Curricular review**	
Course		**Semester**	
Type of work used for assessment		**Sample size / Students in course**	

6. Ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

Scale Element\Rating	4	3	2	1
Research-based knowledge	Selects multiple resources, materials, and texts in order to explore important and relevant information related with the problem and the discipline	Selects few resources in order to explore information related with the problem and the discipline	Selects resources in order to explore information but this is not important or relevant for the problem and the discipline	Does not select resources for exploring information related with the problem and the discipline
Design of experiments	Designs and conducts experiments using the most appropriate methodology (including safety guidelines) in order to determine the required conditions for optimizing the interested outcome.	Designs and conducts experiments in order to determine the required conditions for optimizing the interested outcome.	Conductes randomly some trials for measuring the effect of certain conditions in the interested outcome.	Does not conduct an experiment, not even the execution of some trials.
Analysis of data	Evaluates all obtained data and compares it with reported results.	Evaluates the most of obtained data and compares it with reported results.	Evaluates some of obtained data and compares it with reported results.	Does not evaluate obtained data nor compares it with reported results.
Synthesis of information	Synthesises all obtained information to provide valid conclusions.	Synthesises the most of obtained information to provide valid conclusions.	Synthesises some of obtained information to provide valid conclusions.	Does not synthesis obtained information to provide conclusions.
